

Process Piping Solutions for Nine Major Markets:

- » Chemical
- » Petrochemical and refineries
- » Food and beverage
- » Wastewater treatment
- » Healthcare and pharmaceutical
- » Institutional
- » Power and utilities
- » Manufacturing
- » Packaging

Experienced Professionals with Specialized Knowledge, Offering a Full Suite of Process Piping Solutions.

EMCOR Services Team Mechanical, Inc. offers complete building systems solutions—including HVAC systems, energy management, and process piping—for a wide array of commercial, industrial, healthcare, and other clients. Regardless of the size or complexity of your needs, our team of certified professionals is prepared to provide customized solutions that ensure high-performance operation, optimum reliability, and long-term value.

From fabrication and installation, to repair and retrofitting, EMCOR Services Team Mechanical offers a wide range of process piping services. We have the hands-on experience and specialized knowledge needed to handle the complex piping systems and components involved in variety of industrial processes.

Single-Source Process Piping from Certified Welders and Pipefitters

We have the capacity to function as a single source for industrial process piping solutions, ranging from system layout, installation, and rigging, and extending all the way to testing and maintenance.

We employ a highly experienced team of welders and pipefitters and back them with a full-service fabrication facility. Our facility has approximately 10,000 square feet of fabrication space, helping us deliver custom solutions and increase project efficiency through prefabrication.

A Range of Certified Weld Procedures

Our craftspeople are trained and certified in the following:

- » Metal Inert Gas (MIG) and Tungsten Inert Gas (TIG) welding
- » Stick welding
- » Orbital welding
- » Threading
- » Plastic fusion
- » Soldering
- » Mechanical joints
- » Tri-clover and flanged fittings

Materials Suited for a Range of Applications

We understand that every industrial process requires its own unique solution, which is why our teams work with a range of materials, including:

- » Stainless Steel
- » Carbon Steel
- » Alloys
- » Copper
- » Plastics
- » Lined Pipe
- » Sanitary Tubing

Meeting Every Process Piping Need

Beyond standard installation, erection, and rigging, we also have the capabilities to offer a variety of additional services, such as:

- » Equipment setting
- » Support fabrication
- » Steam heat tracing
- » Jacketed pipe
- » Tank installations
- » Plant maintenance
